

Foundational Questions. Visual Answers. Mastering AWS Fundamentals.

A visual guide to explain foundational AWS questions
and strengthen your intuition behind the AWS Cloud concepts

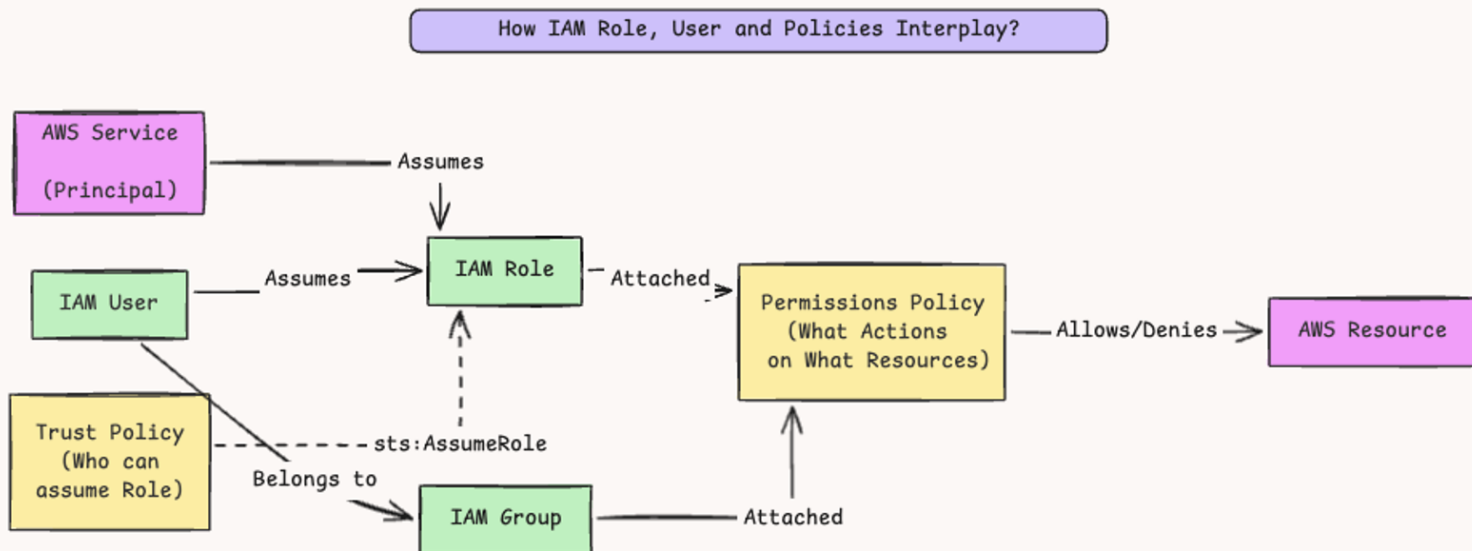

Blog Post:

 senthilkumarm1901.github.io/learn_by_blogging/aws_cloud_technical_essentials

Sample Take

Q4

How do IAM Role, User and Policies Interplay?

Direct Policy Attachment to User (Allowed but not recommended):
You can directly attach policies to a user, but it creates operational overhead and makes auditing harder.

8 Foundational Topics Covered

01

Introduction

Cloud Fundamentals

02

Security

IAM & Policies

03

Compute

EC2 & Instances

04

Networking

VPC & CIDR

05

Storage

S3 & EBS

06

Databases

RDS & DynamoDB

07

Monitoring

CloudWatch & Logs

08

Optimization

Scaling & Load Balancing

01

Introduction

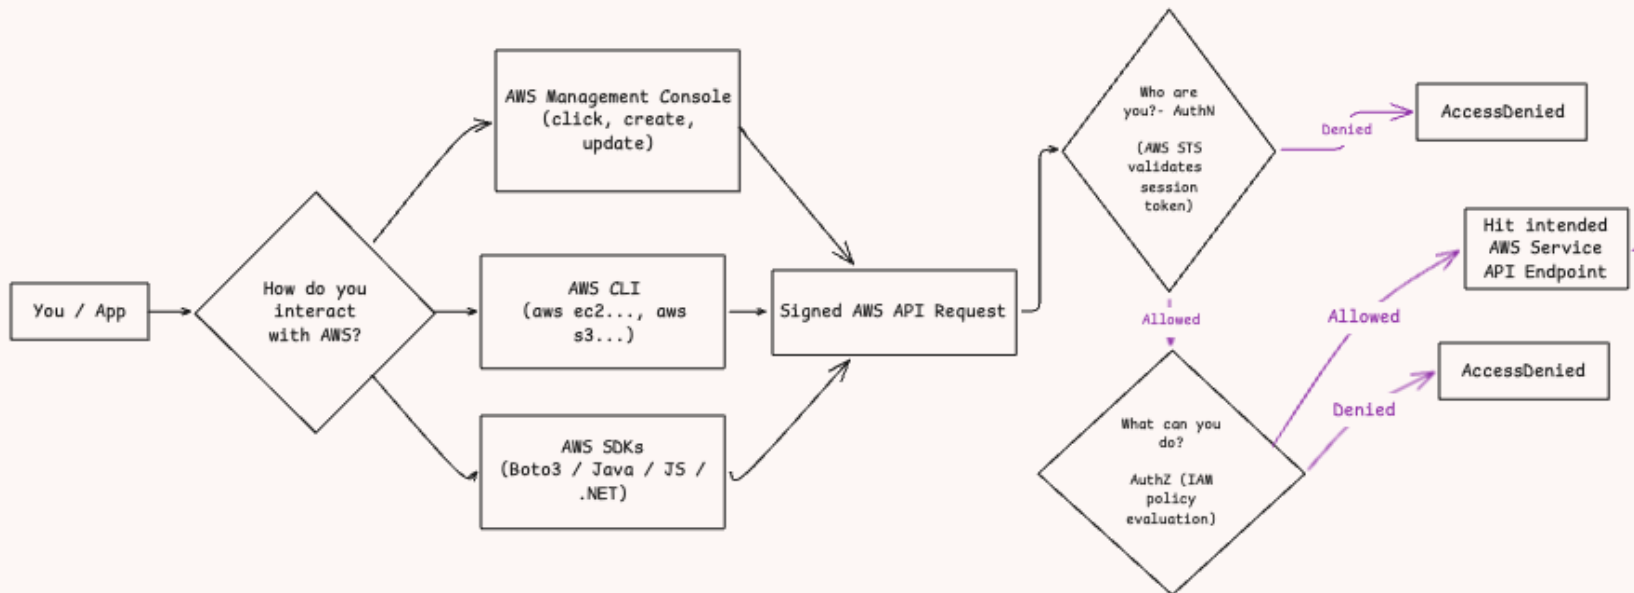

Q1

**What happens behind every
AWS activity you do?**

💡 Concept: Every AWS action is just a chain of API calls

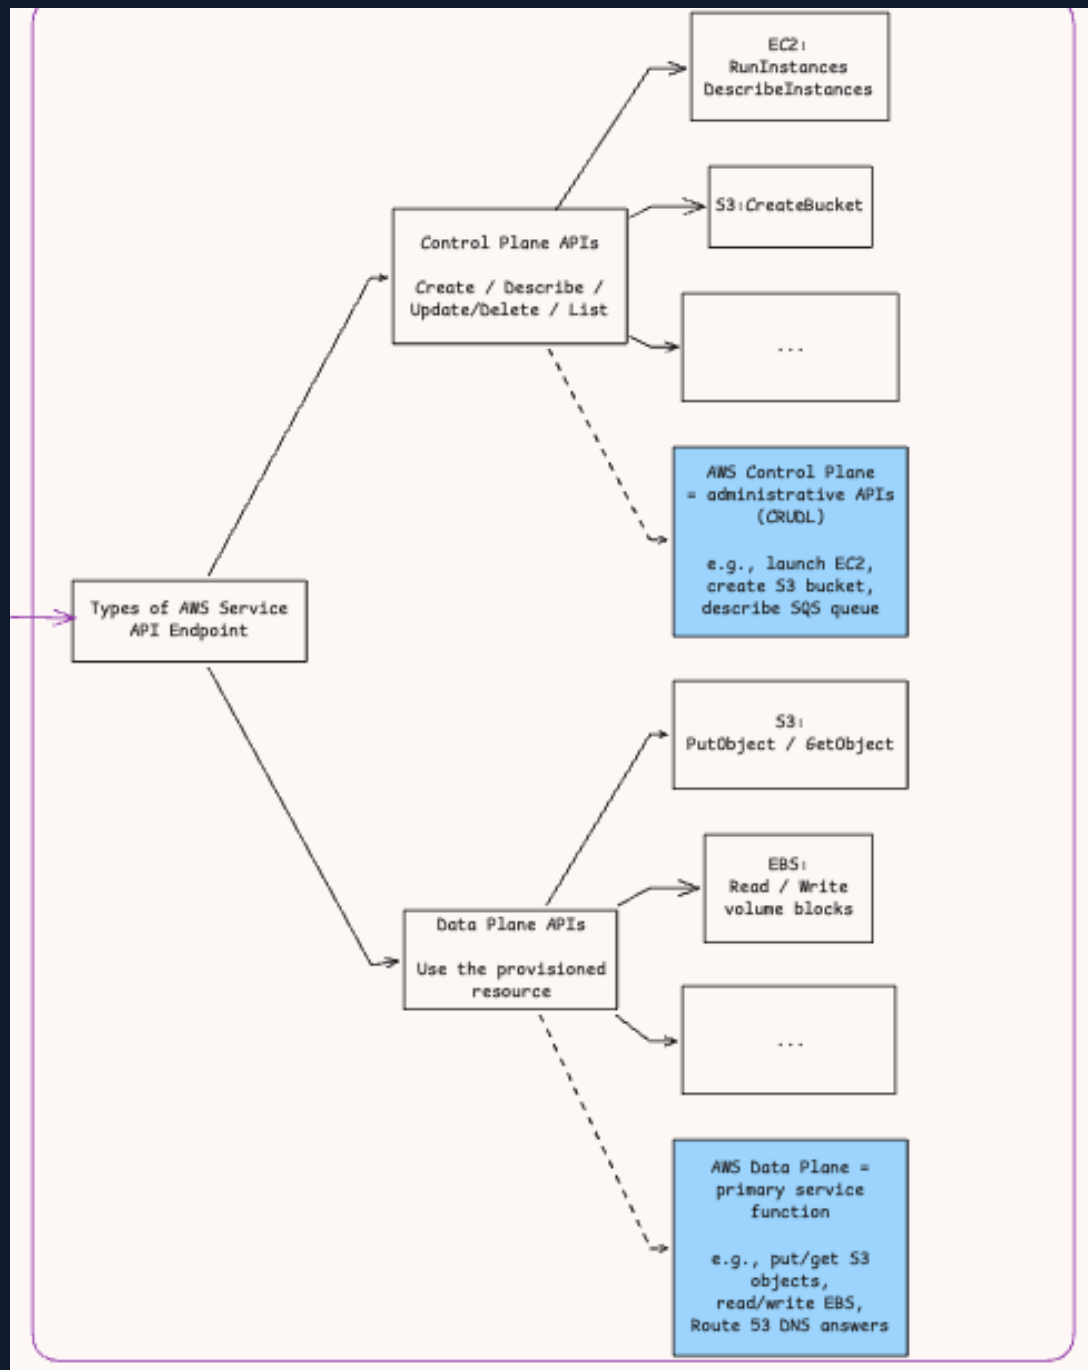

Q1A

How does IAM allow you to reach an AWS service?

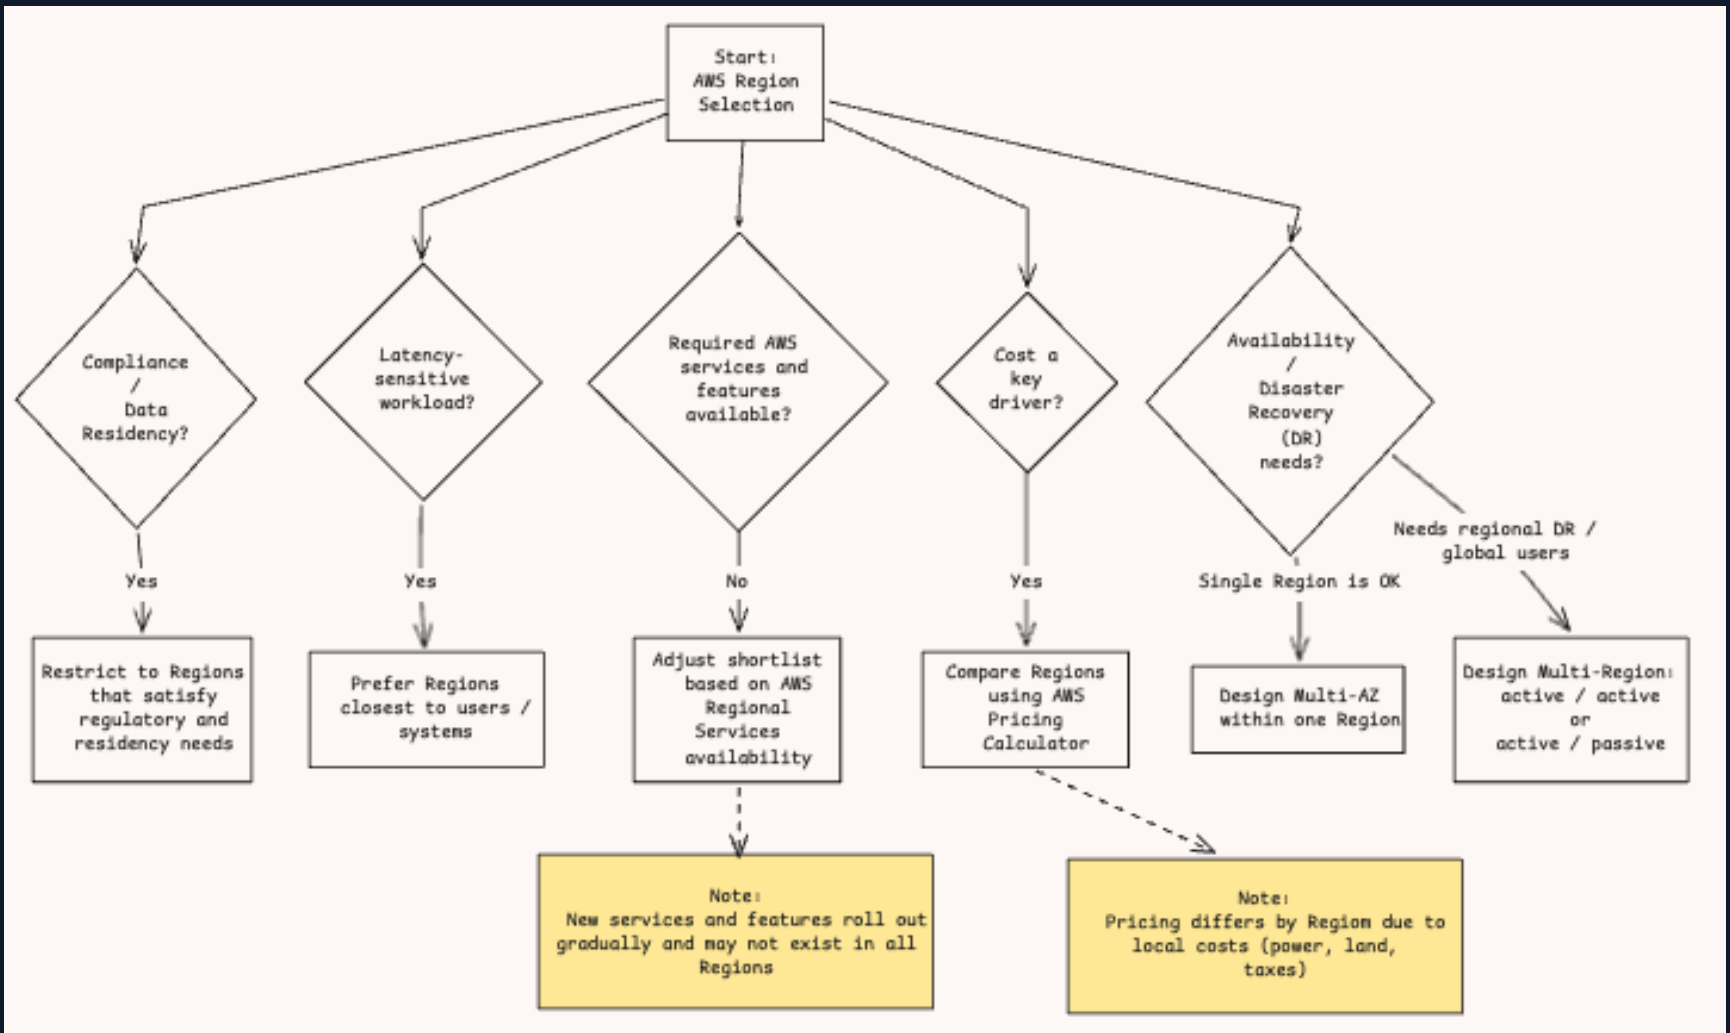

Q1B

What kind of work does the AWS service do after IAM allows it?

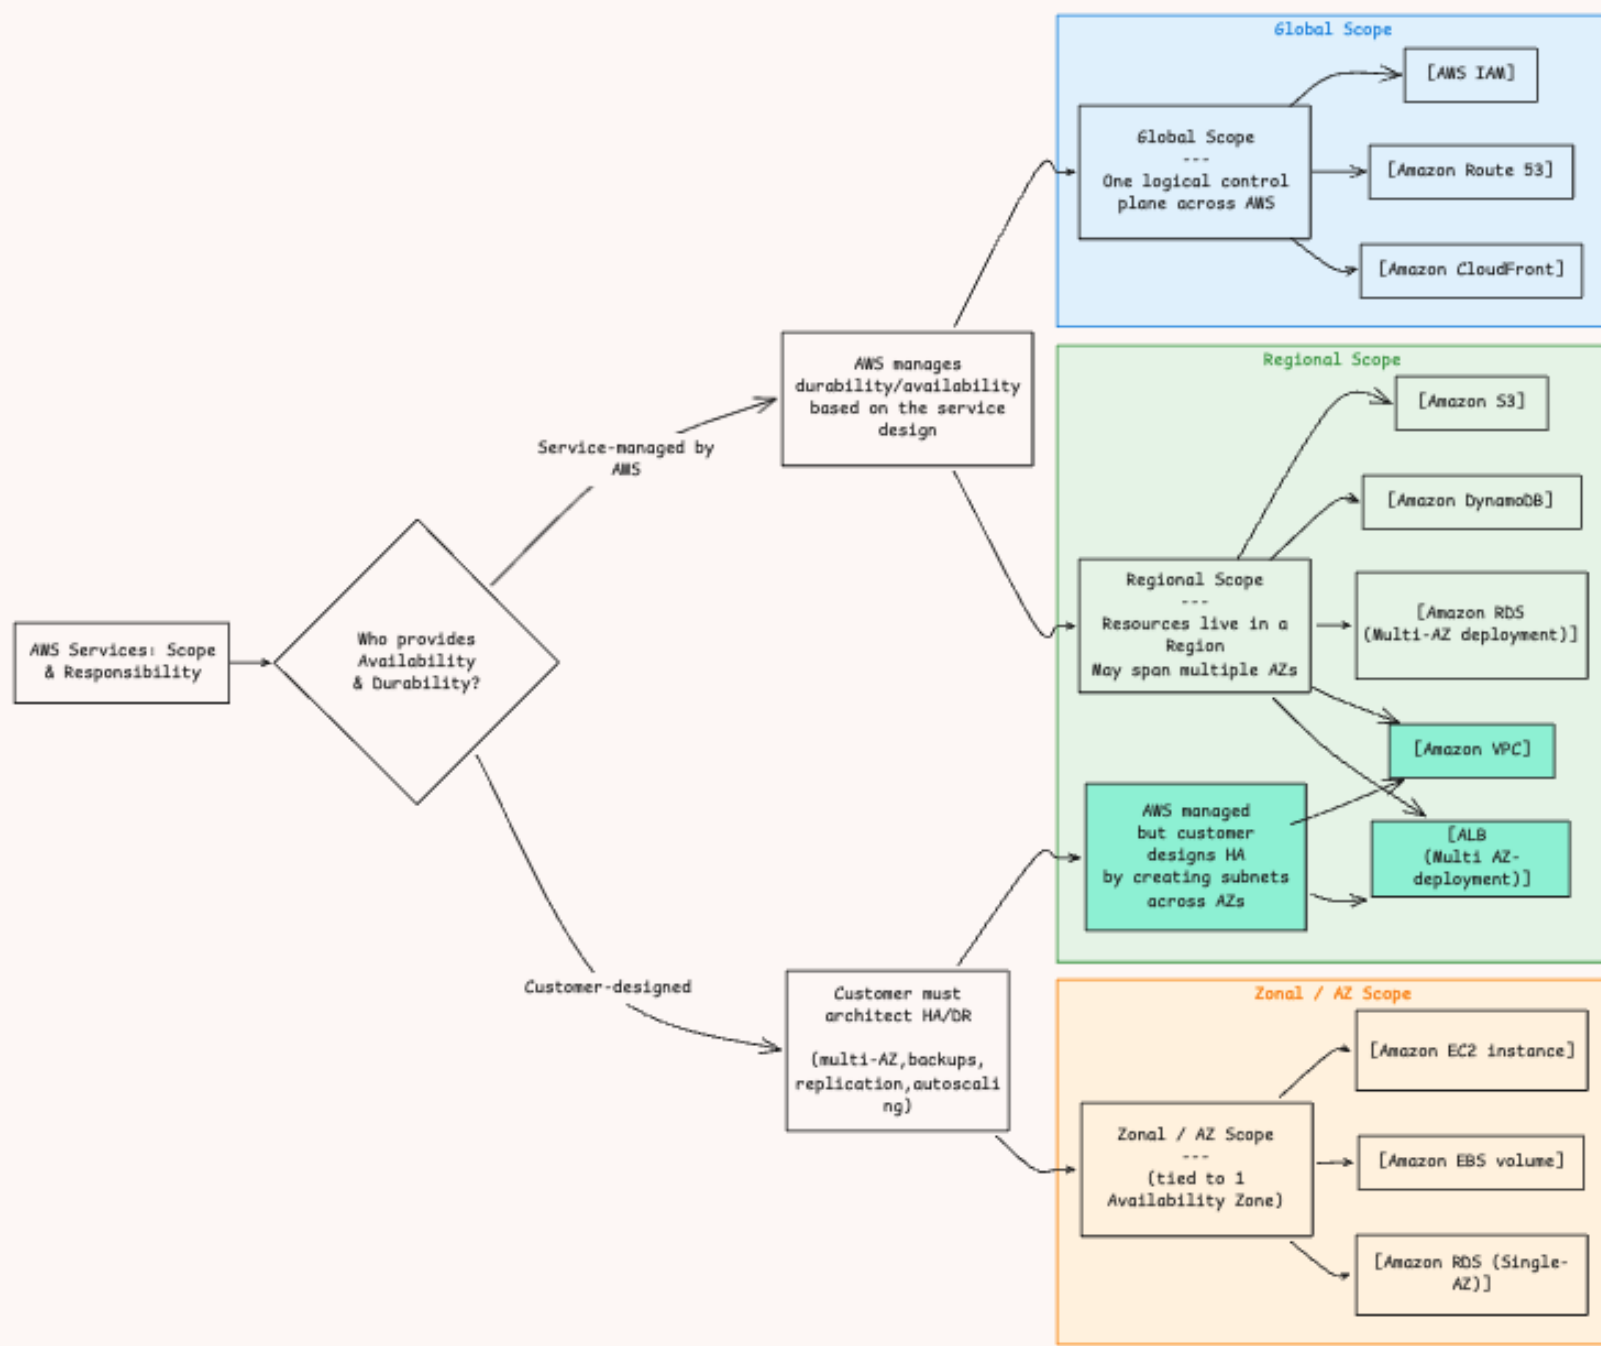

Q2

How is AWS Region selected?

Q3

Who is responsible for availability and durability — You or AWS?

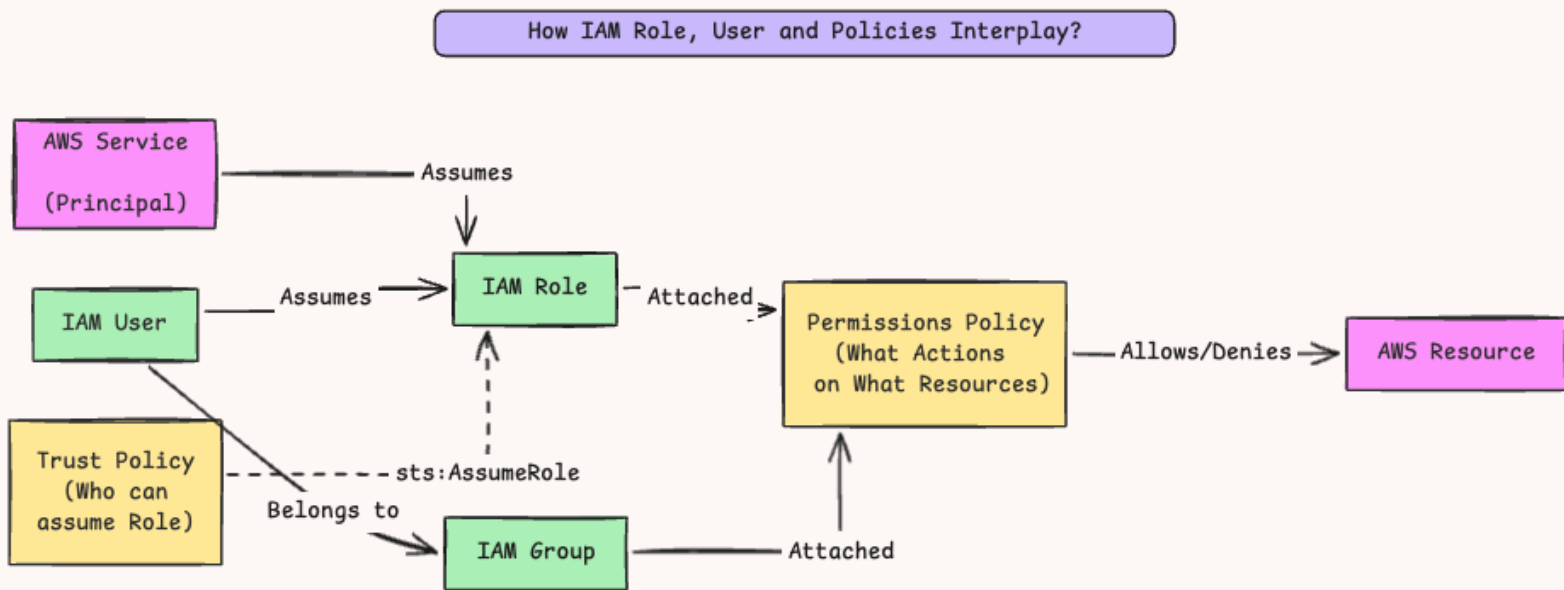

02

Security

Q4

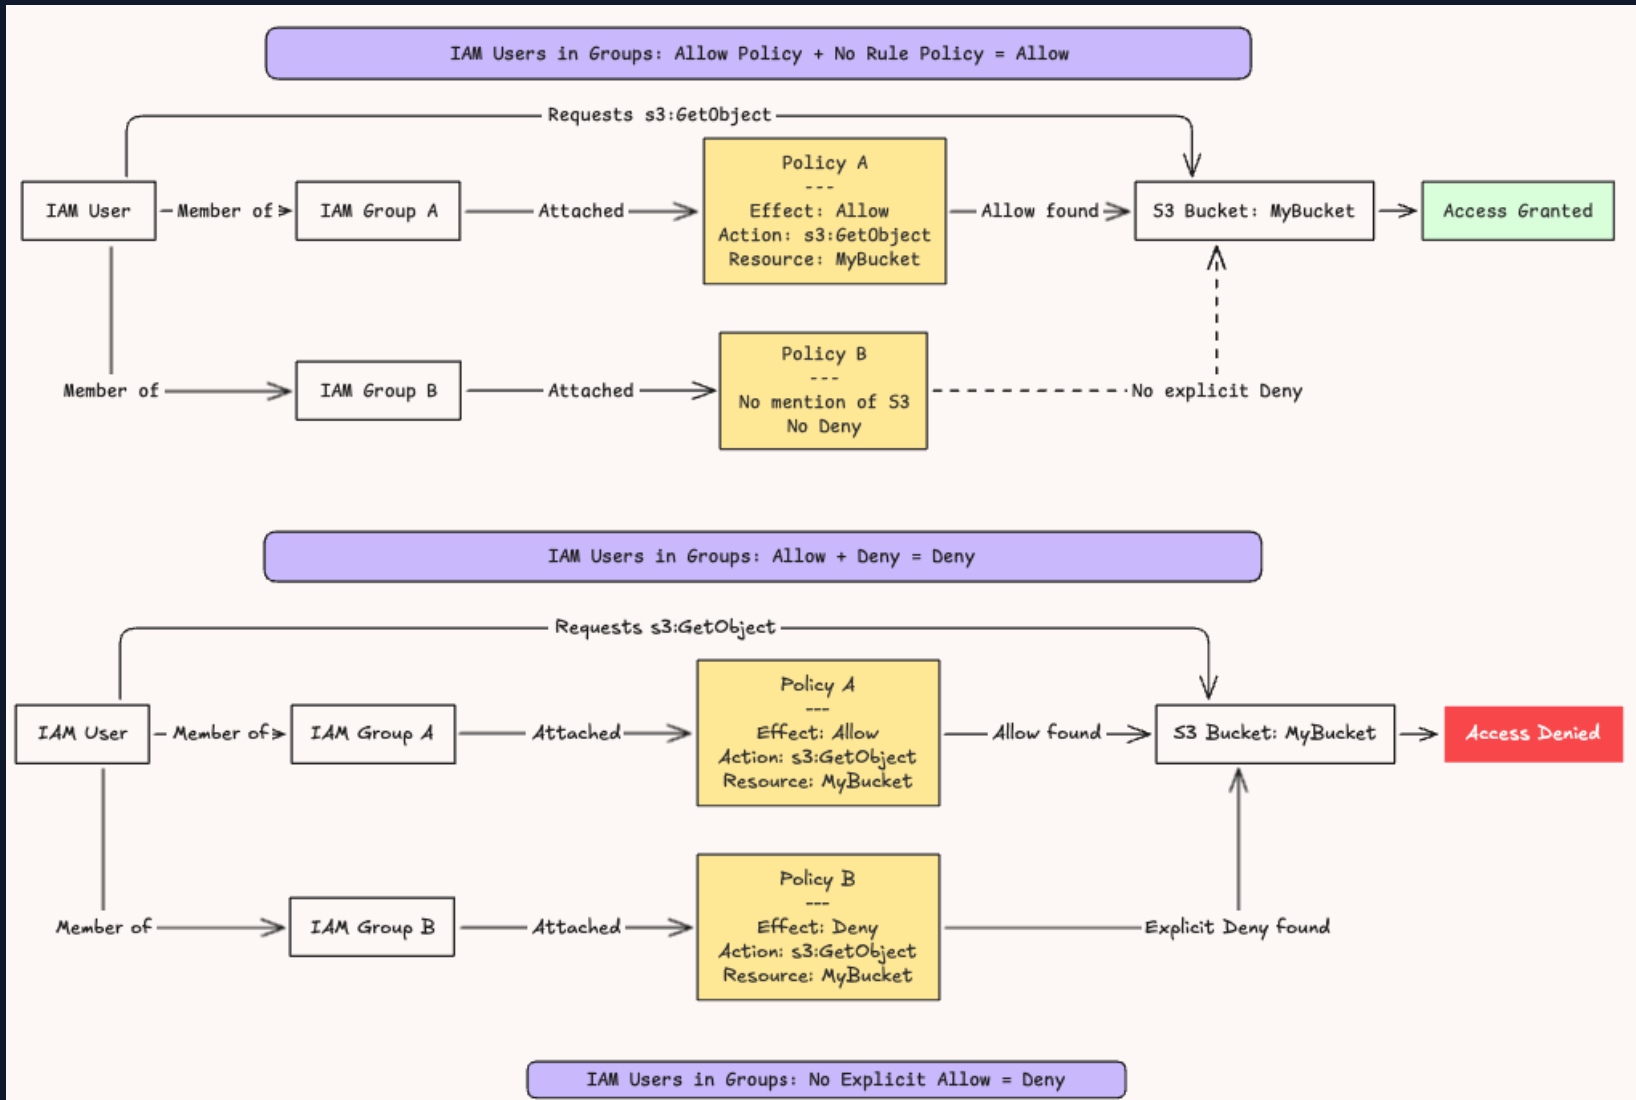

How do IAM Role, User and Policies Interplay?

Direct Policy Attachment to User (Allowed but not recommended):
You can directly attach policies to a user, but it creates operational overhead and makes auditing harder.

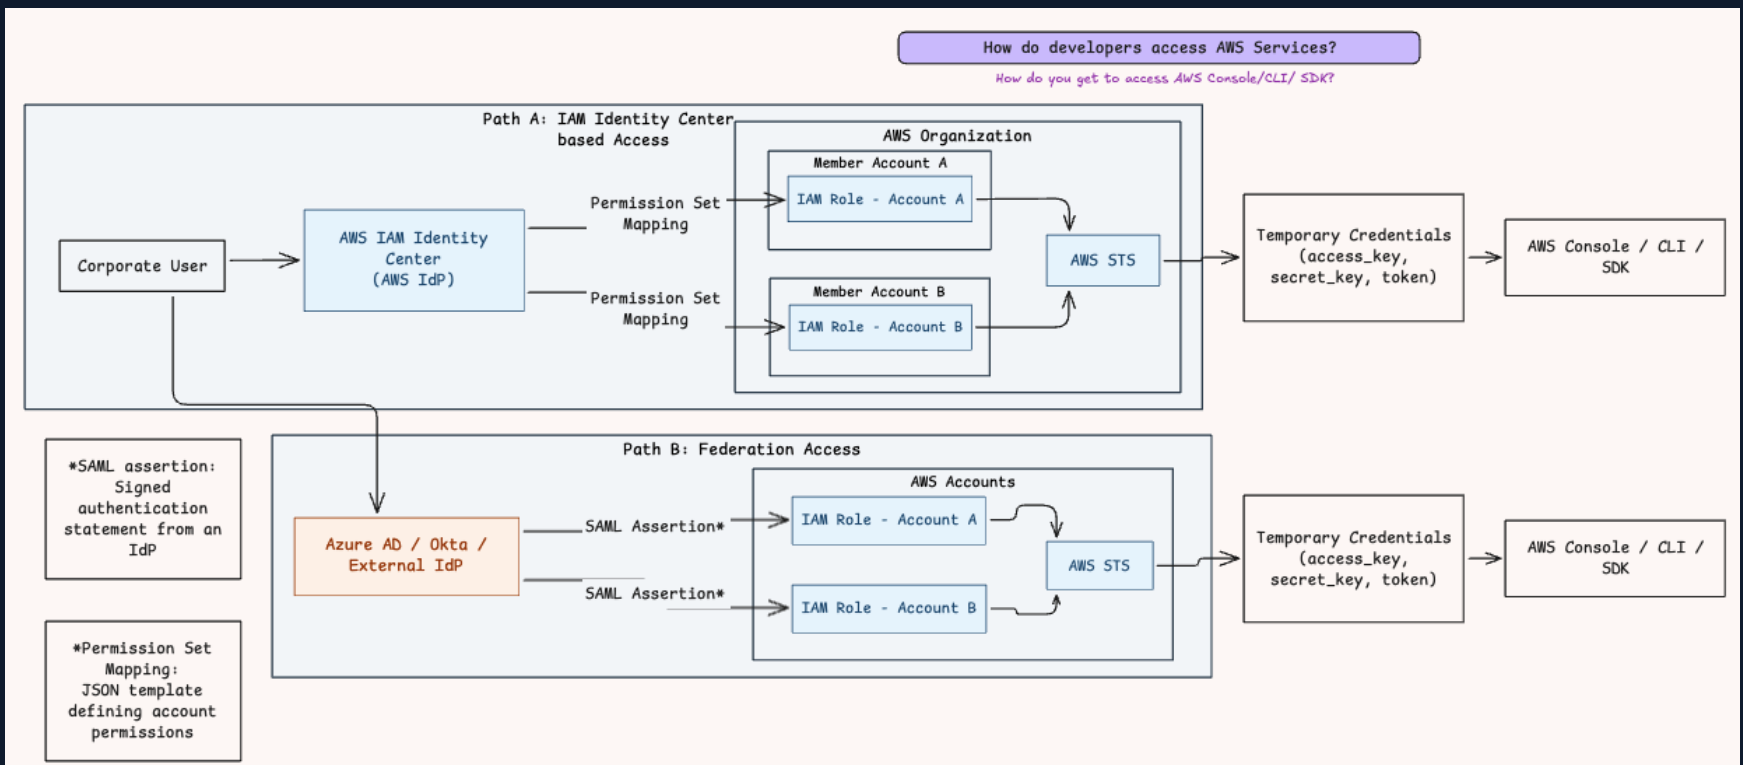

Q5

An IAM User in multiple groups with different policies. What happens to access?

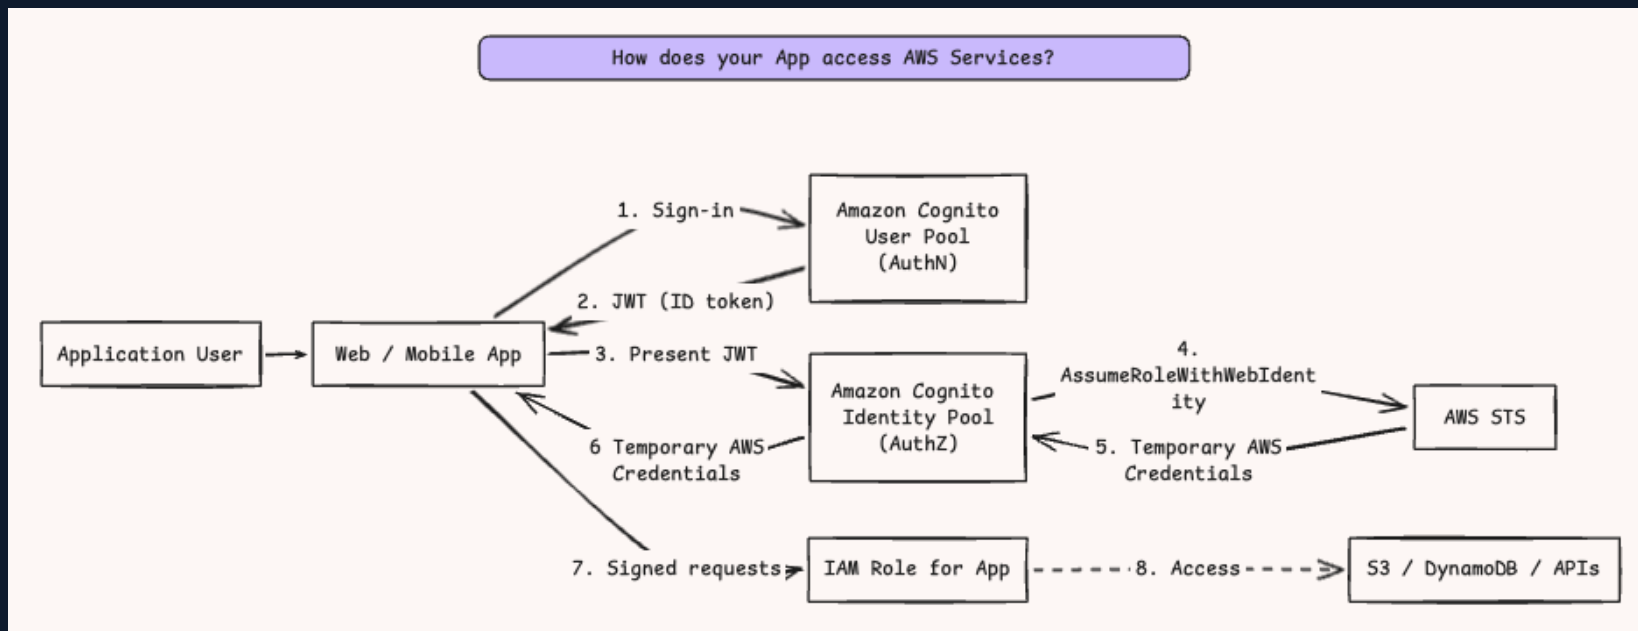

Q6

How do developers typically access AWS services?

Q7

How does your application access AWS services?

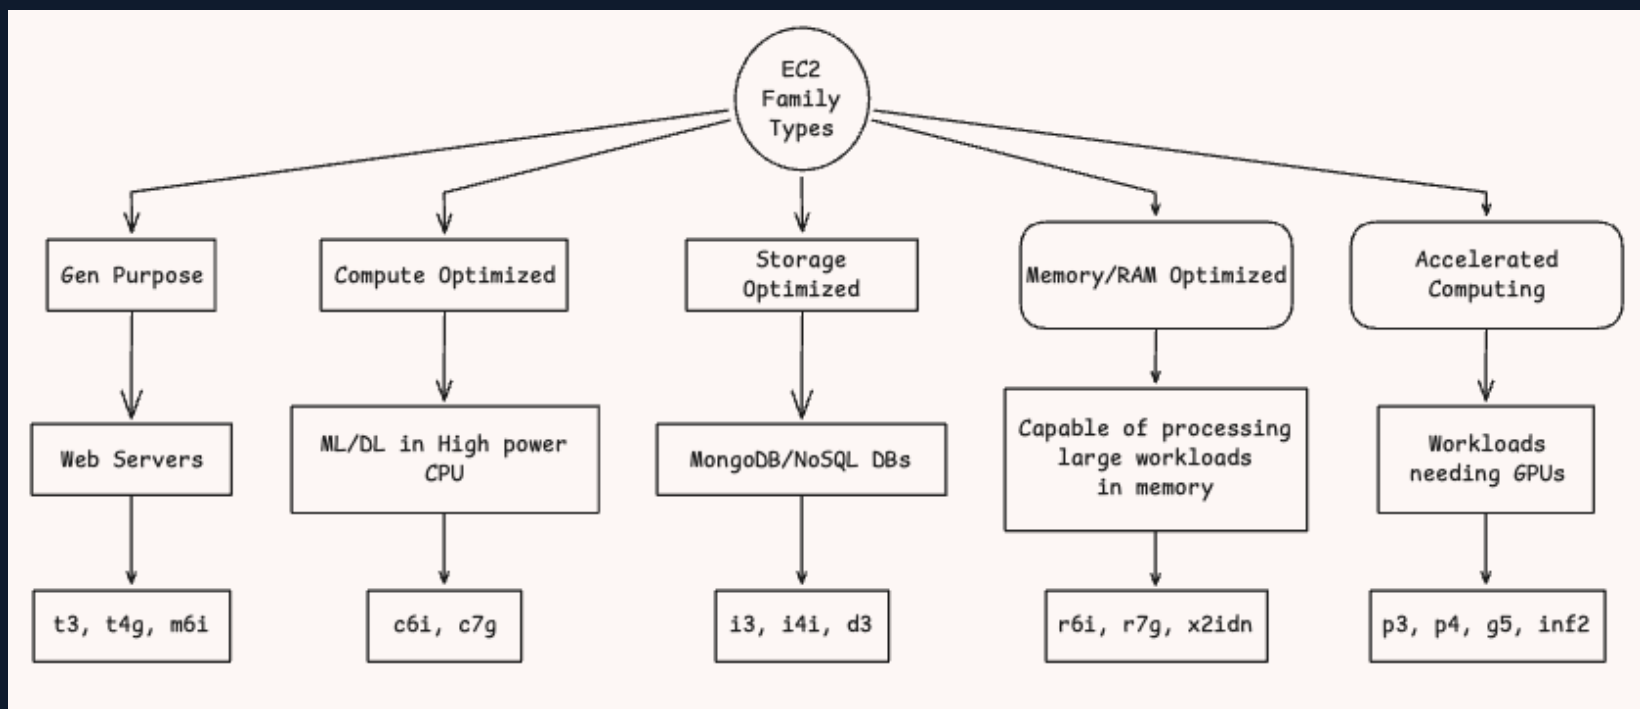

03

Compute

Q8

How do you choose your EC2 Instance Family Type?

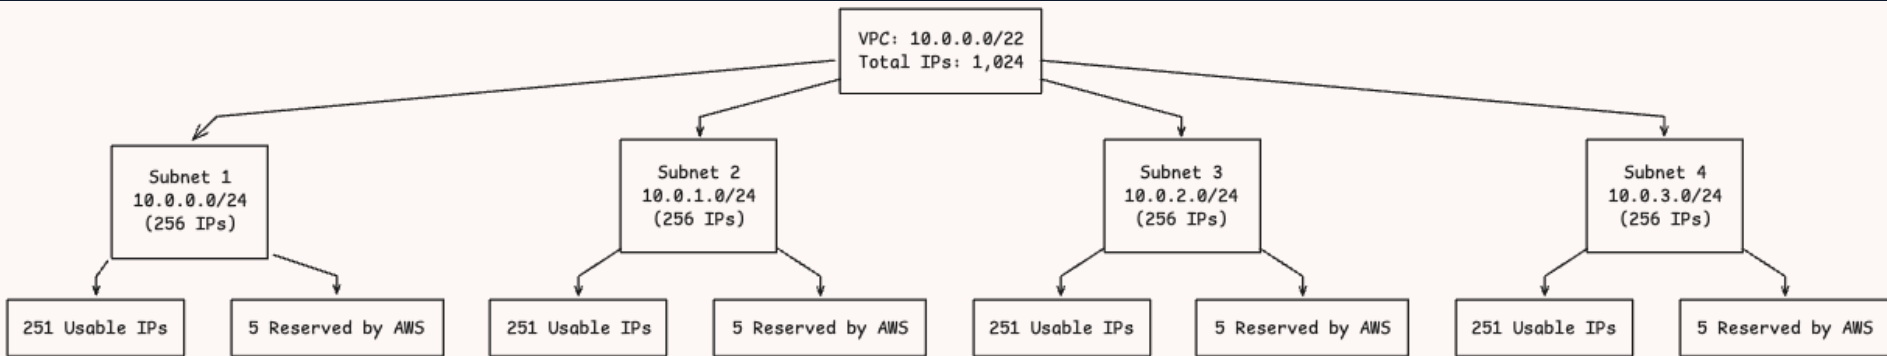

COMPUTE

04

Networking

Q9

How to choose CIDR Ranges of IP Addresses?

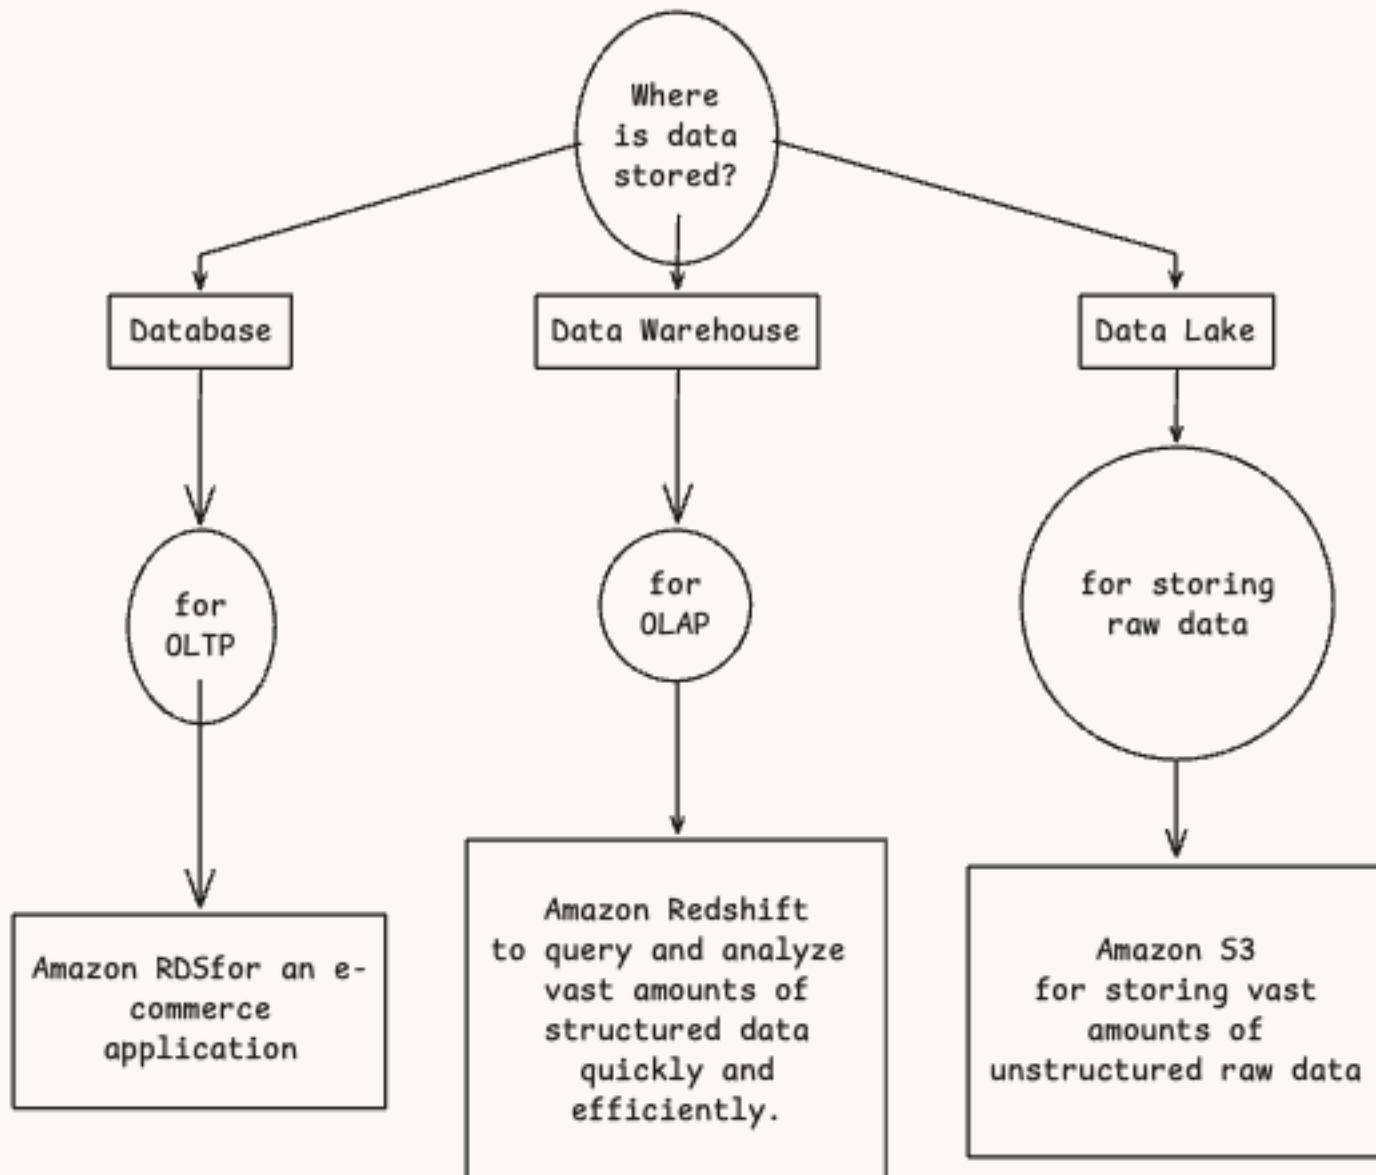

05

Database

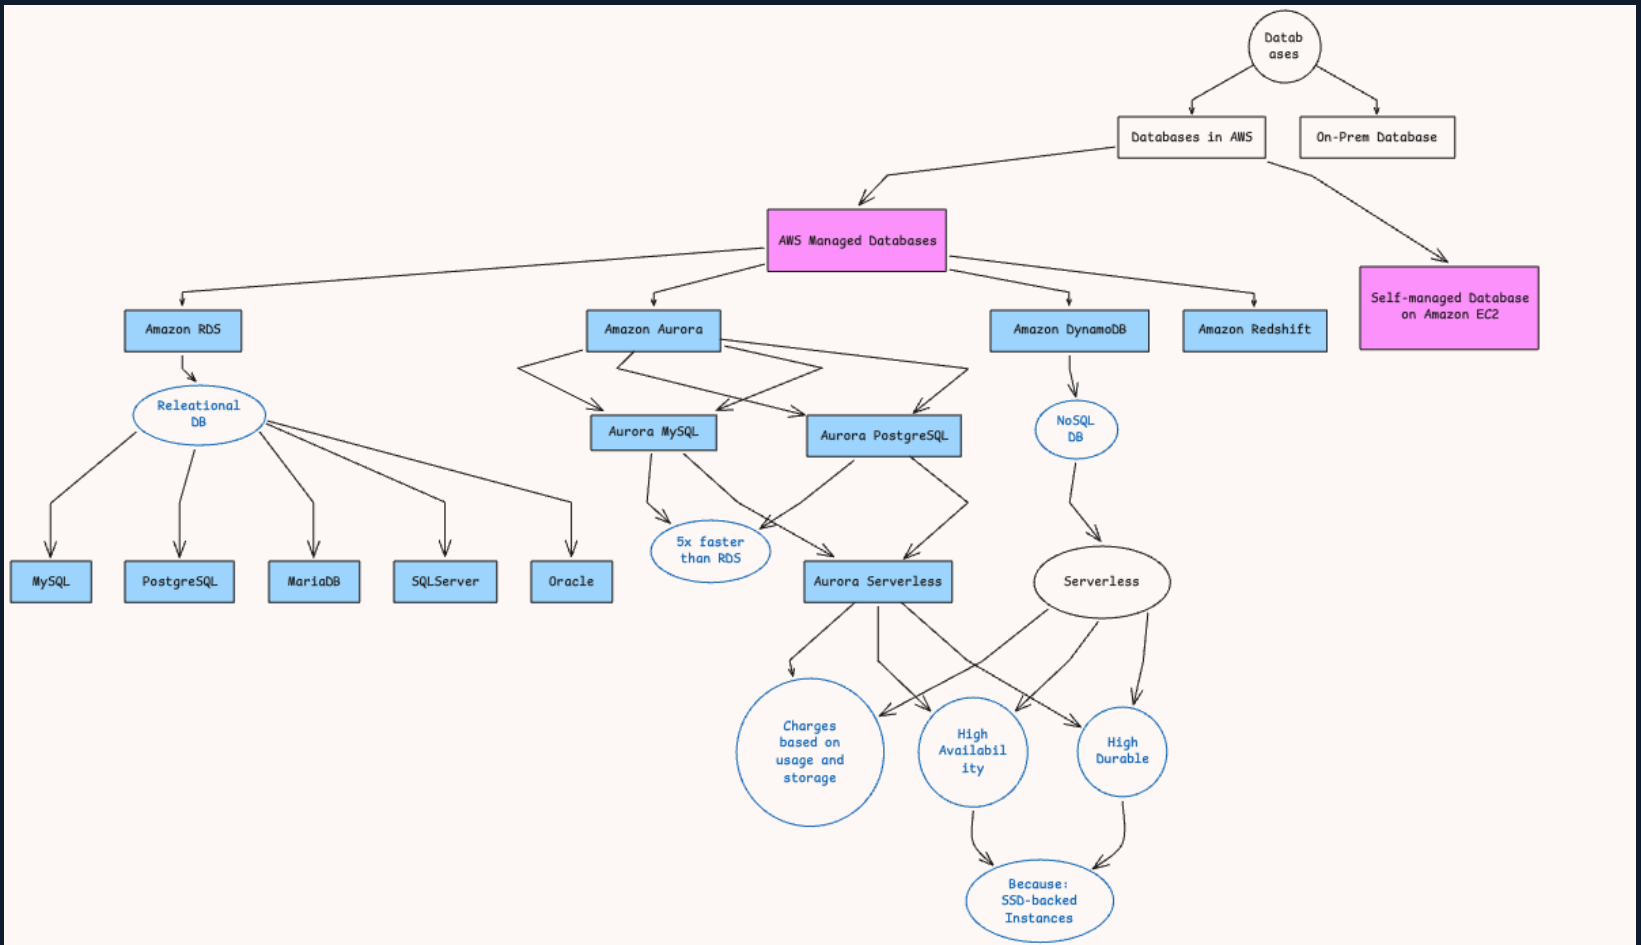

Q10

How to choose between Database vs Data Warehouse vs Data Lake?

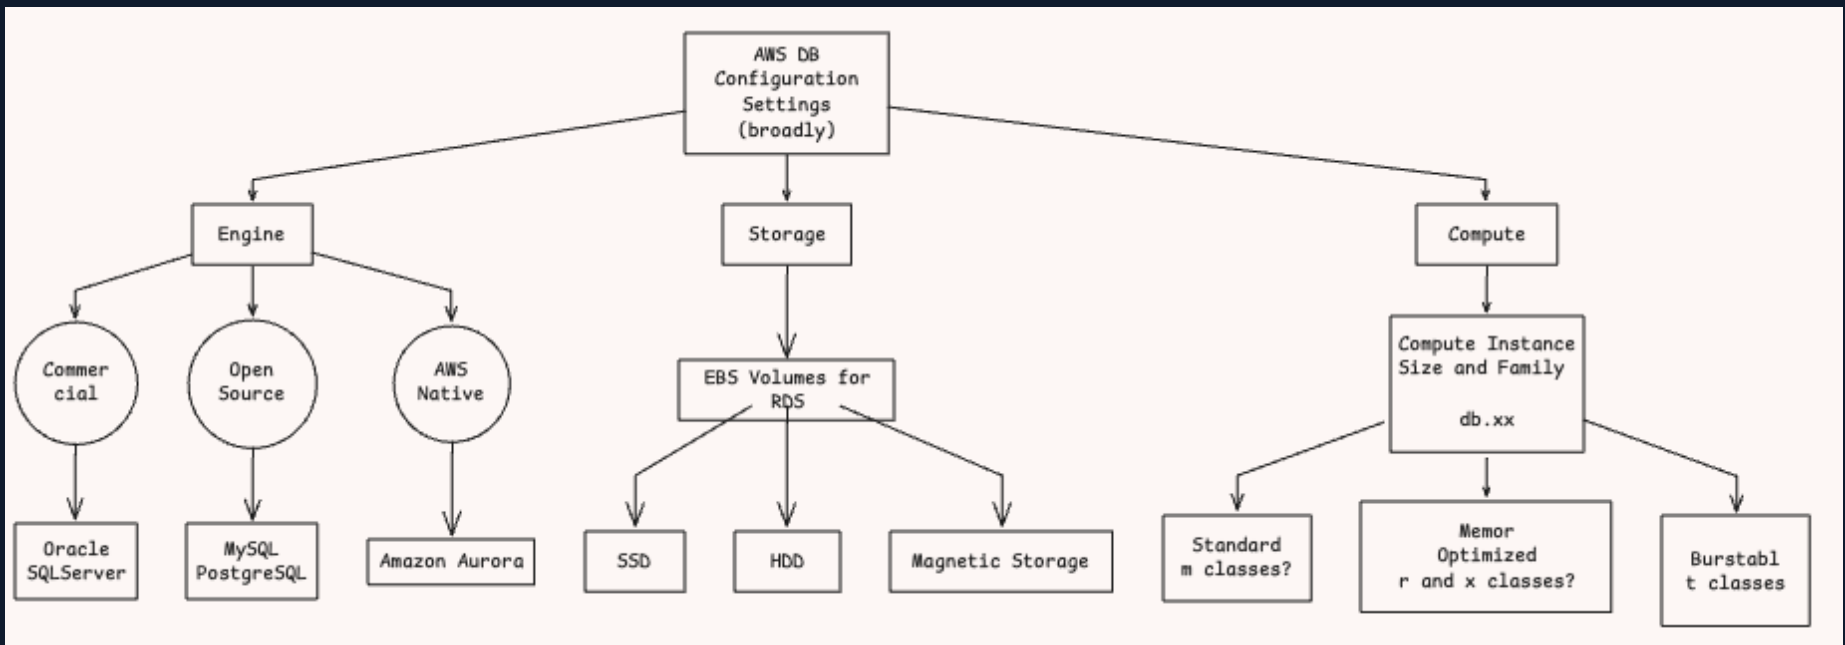

Q11

How do you choose Managed Databases in AWS?

Q12

What are the most common Managed DB configurations you have to choose from?

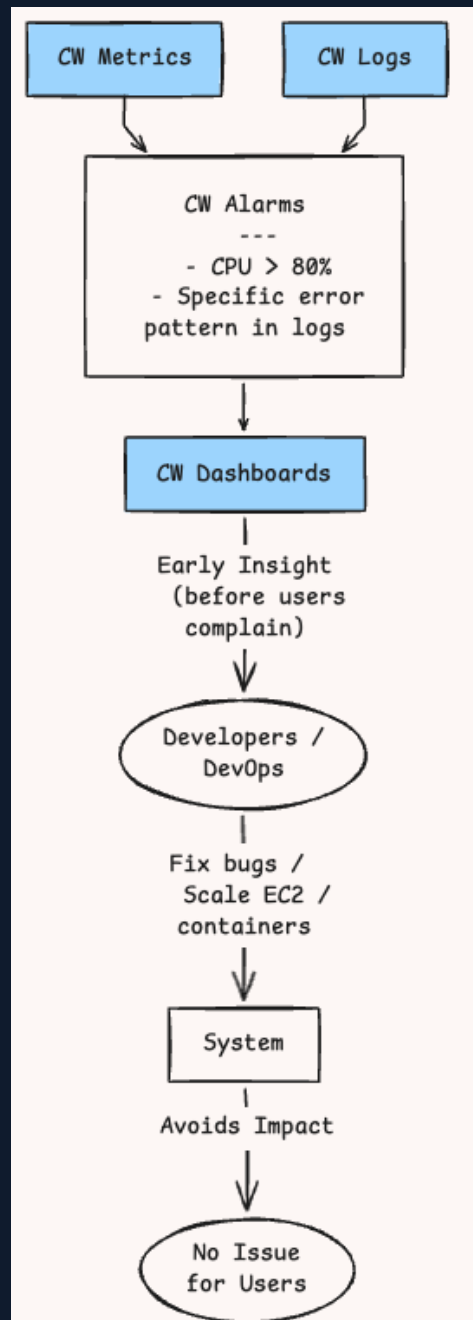

06

Monitoring

Q13

How do you know what is happening inside your cloud system (before your users do)?

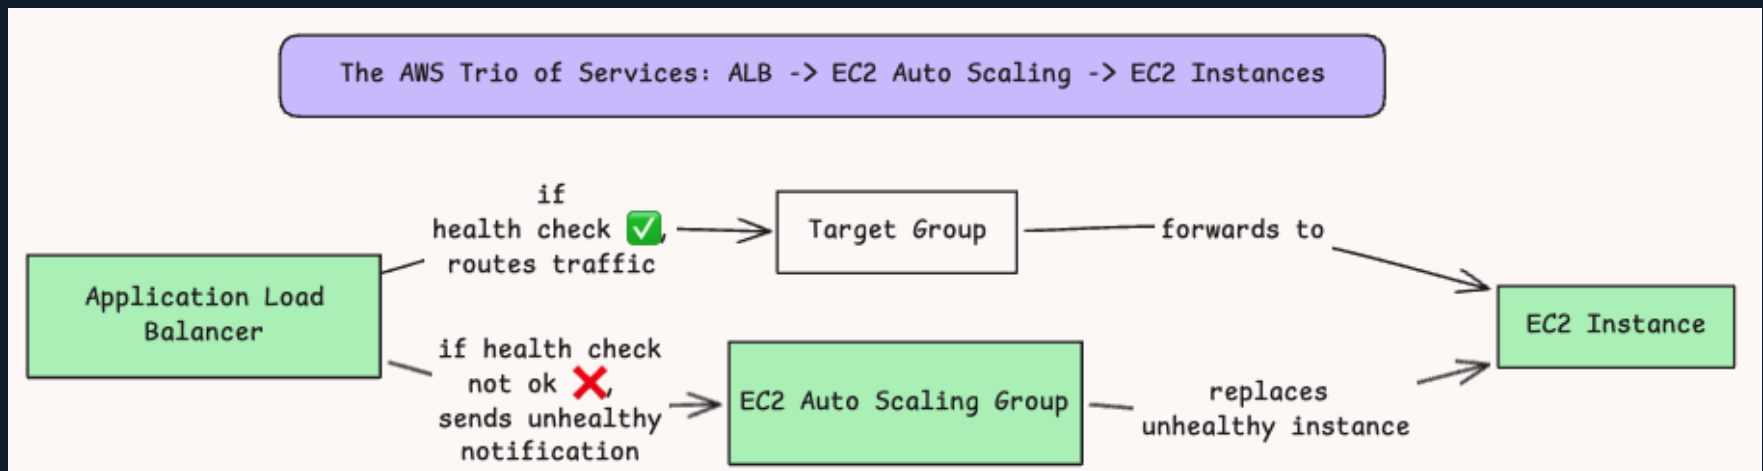

MONITORING

07

Optimization & Scaling

Q14

How are unhealthy EC2 instances in an ASG replaced?
